OPTUS

Email APN / Technical Settings

It is necessary to have an email account with an email provider and to usually have all the settings for that account, including email address, password and the mail server details.

- APN: internet
- Incoming Mail Server Details
- Outgoing Mail Server Details

Mail Servers are the Incoming and Outgoing methods in which email is sent and received between you and your recipient. Commonly used incoming mail servers are:

- Optus: mail.optusnet.com.au (SSL Off)
- Virgin: mail.virginbroadband.com.au (SSL Off)
- Hotmail: pop3.live.com (SSL On)
- Yahoo: pop.mail.yahoo.com.au (SSL On)
- Gmail: pop.gmail.com (SSL On)

The Outgoing mail server will always be smtp.optusnet.com.au when using the Optus Open Network, this may not work when using WiFi and a non-OptusNet email account

---

MMS APN / Technical Settings

- Name: Optus MMS
- Home Page: http://mmsc.optus.com.au:8002/
- APN: MMS
